

Semantic Interoperability Provider

Development

 Affiliate License with SNOMED International to distribute SNOMED CT in France

 Coordinator of the SNOMED CT "French Translation Project Group"

 Contributor to LOINC, translator of UCUM

 Contributor to terminology standards development

 Contributor of the IHE PaLM domain

 Contributor to FHIR resources creation

 Distributor of CDS-Hooks and Smart on FHIR in France

 Contributor to FHIR profile creation for the French market

Semantic Interoperability Expertise

PHAST

Deployment

Interoperability Catalogs

 **CIOdc** collects data from many official sources and processes it in a standard format to support hospital practices around the **medication circuit**.

 **CIOdm** provides description of over one million **medical devices** references into hospital software: references, vendors, labels, classifications (such as Cladimed), medical devices withdrawn from market, bar codes, ...

 **CIOlab** provides standardized descriptions for **laboratory** tests, prescriptions or requests for medical examinations, blood sampling plans, results and test reports.

Interoperable Terminologies

TIO distributes terminological content (value sets, concept maps and code systems) and facilitates its use with Healthcare IT components.

Interoperability Services

SIO offers services aimed at implementing and improving interoperability projects within Healthcare Information Systems.

PHAST

Leading national interoperability provider, PHAST contributes to the development of interoperability standards and provides the complete range of interoperable semantic resources used by health information systems to collect, process and share clinical data.
